

# Uptown Understory

This planting is suited for yards that receive dappled sunlight. These plants thrive under the canopy of mature trees or buildings. The plants selected thrive in 4-6 hours or less of sunlight per day. Make this design pop by using more than one species of shrub and making one of these a specimen or wing planting. Just remember to always plant large woody plants at least 10 feet from your home and research their mature height and width prior to purchasing.

62-94 Total Plants
